## Advanced test series

In order to ensure that any blower from Nissens lives up to the market expectations for high performance and durability, our products are submitted to a range of comprehensive mechanical and electrical test series in our advanced in-house test centre.

Nissens' interior blowers are 100% compatible with OE products as well as strict quality standards, including compliance with ISO 7637 and ISO 16750 specifications as well as the directive of Electromagnetic Compatibility (EMC).

Nissens test series carried out on blowers:

### Performance tests

- Air flow performance test
- High temperature test

### Electrical tests

- Overload test
- Jump-start test
- Starting profile test

### Mechanical Tests

- Durability test
- Vibration test
- Start/stop test
- Long term operation test
- Armature balance test
- Assembly balance test
- Noise emission test

Additionally, Nissens' interior blowers are examined on a regular basis by external independent specialists, including German and Danish technologic institutes.
