When replacing the timing belt on the vehicles listed above, it must be ensured that the fixing bolt on the crankshaft belt pulley is replaced at the same time.

This is a stretch bolt that may only be used once.

IMPORTANT NOTE!

In most cases, the characteristics of stretch bolts mean that they may only be used once. Experience has shown that these snap when they are tightened numerous times.

Use the torque prescribed by the vehicle manufacturer to tighten the fixing bolts!

RUVILLE offers appropriate timing belt kits which, along with the timing belt, tensioner pulley and a "Timing belt replacement" sticker, also contain the applicable fixing bolts.
