For current listing refer to catalogue media

We ask for consideration and delineation of the order number, for example by the PR number. For the corresponding vehicles listed in the catalog, the part numbers include the required locking nuts. For this reason, pay attention to the part criteria in the (online) catalog when ordering.

The Ruville locking nuts supplied in these kits satisfy the OE quality specifications and are also protected against corrosion by a high quality Geomet coating. The different designs of the nuts are matched to the specific requirements of the different wheel carriers and are indispensable for carrying out a proper repair.

We always recommend the use of new, high quality locking nuts – regardless of the type of repair work performed on the suspension.

This track rod end is also characterized by high Ruville quality standards, of course, and includes a corrosion-resistant, galvanized zinc coating as well as a durable, transparent TPU sleeve. With its special aging resistance, the lubricating grease used guarantees long service life.
