

MANN-FILTER

Product Information

No. 155
21.11.2019

PU 8028 replaces PU 8021

The height of the OES-filter element for 1.6l and 2.0l engines without water sensor of the VW Group was increased for a better usage of the mounting space.
This allows to include a higher area of a high-efficient filter media.

As usual MANN-FILTER follows this change and replaces the fuel filter element PU 8021.
The new element PU 8028 has the same height and fulfils the same requirements as the new OES-part.

The shaped gasket in the middle ensures a safe mounting in all fuel filter housings for these applications.
